**Decrypt a file**

To decrypt a file, AxDecrypt is used. Optionally AxCrypt2Go can be used, but the following instructions describes AxDecrypt.

1. Start AxDecrypt from where the file was saved, by double clicking from Explorer

2. Choose the filet that is going to be decrypted. Click File menu, then click Open.
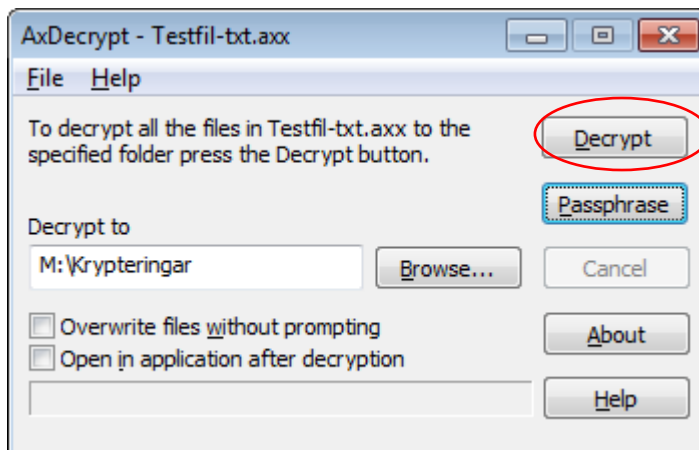

Mark the file that is to be decrypted.

3. If needed, Browse the location to where the decrypted file is to be saved. The default folder is where the encrypted file is located.
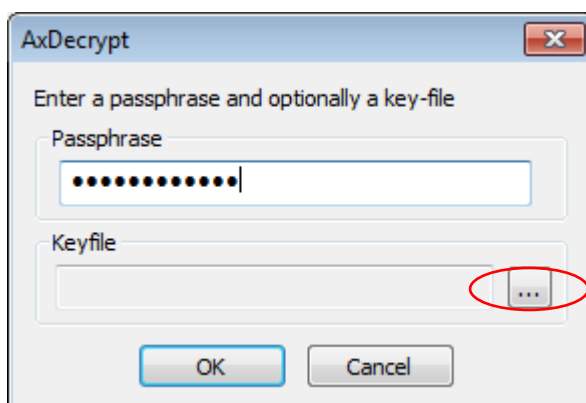

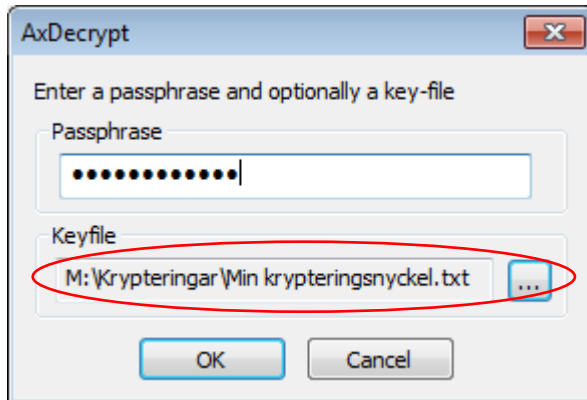

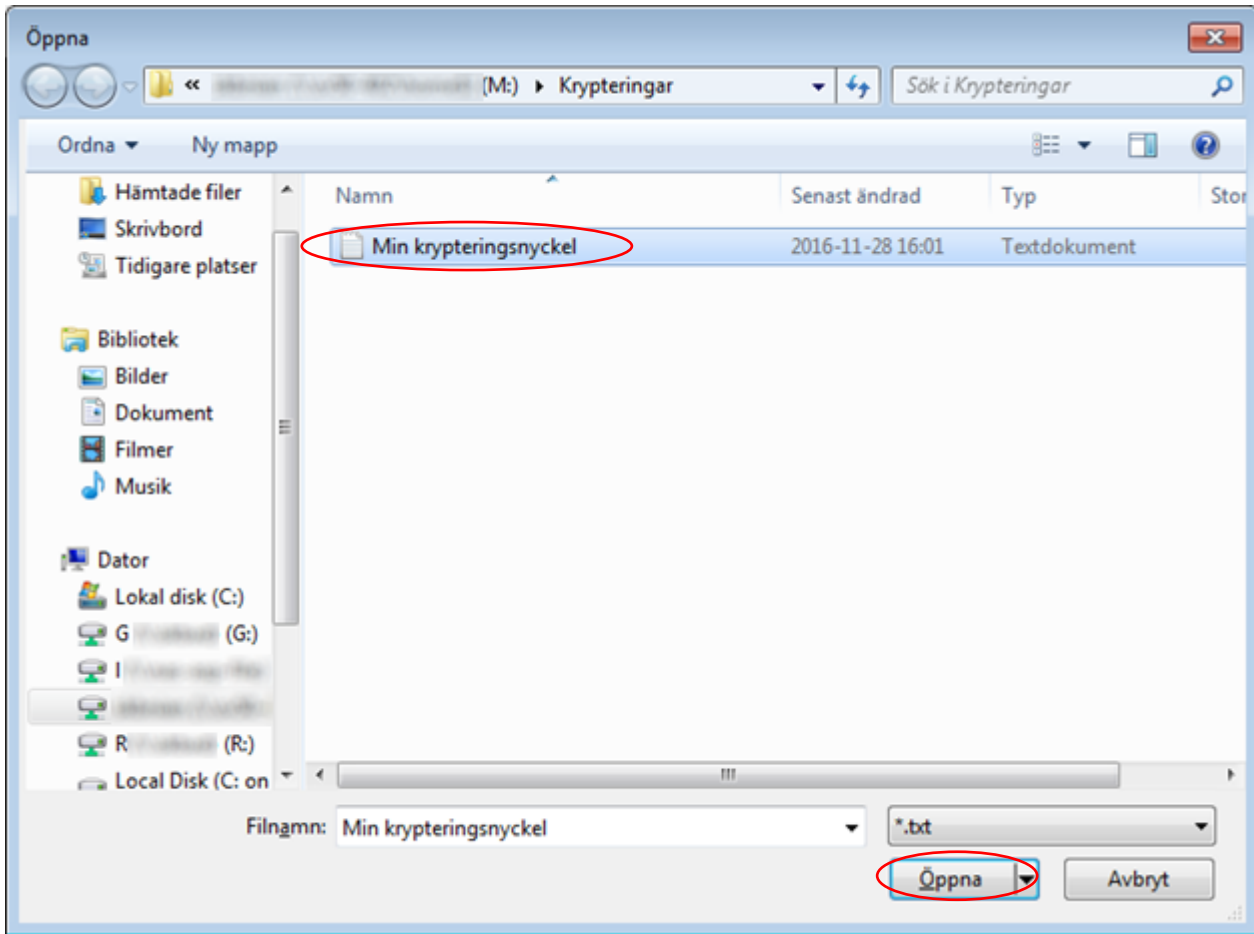

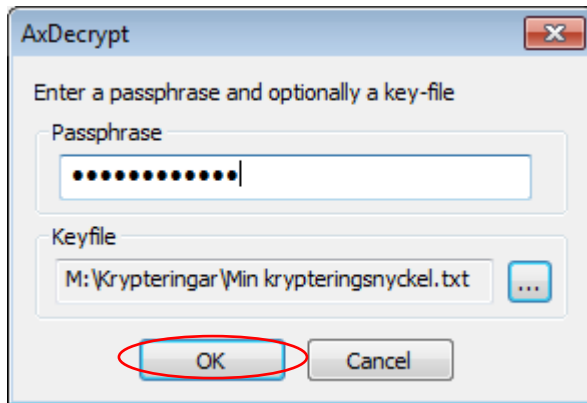

4. Click Decrypt

5. Type the password

6. Browse the key file. Only if key file is to be used.

AxDecrypt

Enter a passphrase and optionally a key-file

Passphrase

••••••••••••

Keyfile

M:\Krypteringar\Min krypteringsnyckel.txt   ...
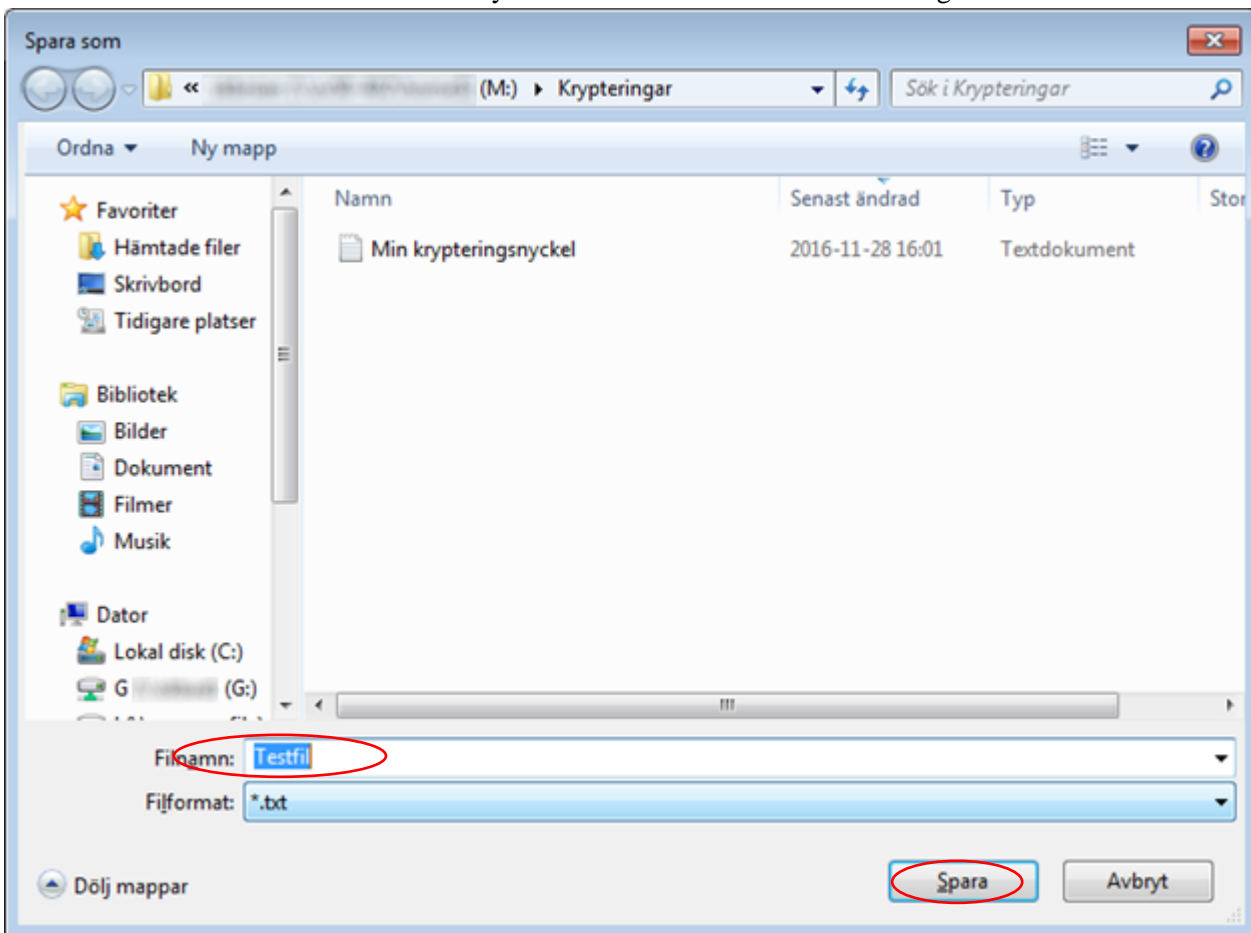

OK   Cancel

7. Click OK

8. Choose a file name – only needed if the file name is to be changed.

9. The file is decrypted and saved in the selected folder.
   Open the folder from Explorer to access the decrypted file.
   The encrypted file is still remaining until deleted manually.
